SEE & SPRAY™ PREMIUM PRECISION UPGRADE

TARGETED, IN-CROP SPRAYING YOU CAN ADD TO SELECT JOHN DEERE SPRAYERS.

Fewer inputs. Less impact on crops. More savings. That's the idea behind these Precision Upgrades. Technology upgrades that can boost the weed-killing power of your current sprayer, while increasing accuracy, reducing herbicide use, and improving your bottom line.

LESS HERBICIDE COST. MORE PROFITABILITY.

See & Spray Premium is a Precision Upgrade that can revolutionize how you use your current qualified sprayer. Available for pre-model year 2025 John Deere 400/600R Series Sprayers, it can help you precisely manage weeds to:

- **INCREASE YIELDS**
- **IMPROVE COST EFFICIENCIES**
- **CREATE MORE PROFITABILITY**

See & Spray Premium sees, targets, and kills in-season weeds using advanced cameras and machine learning that distinguishes crops from weeds and selectively target sprays only the weeds. Shown to reduce non-residual herbicide use similar to other See & Spray technologies, See & Spray Premium also delivers a hit-rate comparable to traditional broadcast spraying ... all at operating speeds of up to 15 mph. That means less herbicide, less costs, and less impact to your crops and your land.

Expand Your Crop-Protection Toolbox

ExactChem™ is an integrated solution that allows farmers with John Deere planters to easily and accurately soil-apply granular insecticides using electric drive. You work all season to raise your crop. ExactChem™ helps protect your crop's yield potential from damaging pests.

ExactChem™

Flexibility

A wide range of planting speeds and rates provides you with more options to get the job done right.

- Dispensing rates of 1 to 13 lbs/acre
- Operate at a wide range of planting speeds of 1.2 to 10 mph
- Expand your crop protection options with hoppers that do not restrict you to a particular product or manufacturer

Accuracy

Electric drive provides precise control over the meter so you can apply the right rate regardless of speed.

- Control your application down to the row with row-by-row section control independent of the seed
- Gain the ability to run customizable rate control and prescriptions

Ease of Use

ExactChem™ helps you save time while providing flexibility and accuracy as a granular insecticide tool.

- Save time with easy setup and calibration of the system for various products and rates from the comfort of the cab via SeedStar™ system interface
- Use the Gen4 or Gen5 Display that's already in your tractor
